**Appendix 2**

**Neighbourhood Operations – Impact on Key Outcomes**

---

**Street Cleansing Tonnage**

The council records street cleansing tonnage separately to household refuse. Street cleansing tonnage includes all the flytips collected. The below data uses year to date tonnage data and forecasts to the end of this financial year. As can be seen there has been an increase this year. In total the forecast is that waste will have increased by 2,221 tonnes this year compared to last year. The forecasted 2018/19 figure is higher than the last four years.

**Analysis: Newham Survey question – ‘Which of these are you personally most concerned about in your local area’?**

Respondents are asked to pick their top three local concerns from a list. Litter/dirt in streets and crime and ASB are the top two concerns, and have been since 2014.

43% of residents chose ‘litter/dirt in streets’ and 39% of residents chose ‘crime and ASB’ in their top three local concerns. Looking at the period from 2010 concerns about litter are increasing.
Analysis: Reports of Flytipping

The year to date reports about flytipping (both from our own staff and residents) has already exceeded the number of reports received last year. Forecasting the year end position based on averages so far this year gives a year end figure of 28,944 reports. An increase of 33% on last year.
